

Supporting our local agriculture.

We are passionate about supporting agriculture in our community. Our feeds have been designed to not only provide the best nutrition for your animals but to support our local farms as well.

We have formulated our feeds so that all the grains and legumes we use can be grown locally by our farmers who surround our mill.

By using local ingredients, we are able to stimulate our local community and lower our carbon footprint. Many of our grains only travel 15-30 minutes from

to mill.

Superior Results
A Veteran owned family business.

Your Partner in the Field

Everyday our team gets to work with Farmers and Hobbyists from around the PNW. These relationships have taught us what our customers want and need in their feeds. Our team strives everyday to create exceptional feed for your animals.

ed has been formulated to e superior results. These are realized through ch and development focused n quality ingredients and ating them into rations your s can process efficiently.

ture your animal's highest al whether that be laying uilding muscle or ing milk. Our feeds will help chieve superior results.

Purposely formulated for superior results.

An example of how our Premium Layer is designed

Seasonal Formulations!

Giving your birds exactly what they need to produce their best at the right time of year.

Whole grain ingredients!

No masked "Grain Products" on our labels. We make sure you know what you are feeding your birds.

2 highly effective sources of calcium!

From limestone and oyster shells, Limestone is soluble and is quickly absorbed, supporting stronger bones.

Oyster shell sits in the gizzard where the body uses it to create the shell for the egg through the night. No need to buy oyster shell.

Guaranteed methionine level of .40%!.

This is an essential amino acid required for feather development. No need to switch to a feather fixer for your birds.

No Corn or Soy and packed with Omega 3s!

Our ingredients of non GMO expeller pressed canola and camelina are full of omega 3 fatty acids. When your hens eat our feed, their eggs will have higher amounts of omega 3s then those eating a ration with soy.

Alfalfa

Helps infuse the eggs with Chlorophyll which give your eggs the dark yolk color. Alfalfa also provides Omega 3s into the hens diet, which are passed on to you through the egg!

Added Probiotics!

Beneficial bacteria added to the diet aid digestion and nutrient absorption, resulting in faster growth and better overall health. Direct fed microbials also replenish the beneficial bacteria flora, those "good bacteria" which directly compete with destructive or harmful pathogens such as Coccidia, E. coli and Salmonella spp. Excess beneficial bacteria are excreted in the manure where they help correct the balance of bacteria in the litter.

Added Digestive Enzymes!

Digestive Enzymes assist your birds with fully using the ration they are fed. The more your hens fully utilize their feed the less they eat and the healthier they are.

Available in mash or pellets!

Does your feed provide peace of mind?

You have gone to great lengths to raise your animals. Maybe you do it because you want to provide your family with a healthy alternative to the mainstream food at the grocery store. Or maybe you enjoy the company of a faithful fuzzy or furry friend. Whatever your reason, you want to feed your animals well.

Your feed company should care for your animals as much as you do. You want confidence in the feed you are giving your animals. What they eat will directly effect your quality of life.

Partner with us and have confidence that we will provide superior feed for your animals best health, growth and production. Whatever your goal is, we are here to help you achieve it.
